

# DC-NET WP3

*New services workshop*

## DISCUSS/PRESENT Conference service/sharing services

Aurélie AUDEVAL - Ministère de la Culture et de la Communication

# Definition

## Services offered by “conference services”

- share screen
- share documents
- chat
- video
- file sending

## Survey results

- Only few centres (4) are offering a video conference system
- All the above evoked detailed services are not always provided. Especially the files sending
- The service providers are mostly Internal department and E-infrastructures (very few commercial actors)
- Some researchers evoke a lack of power of systems

# Analysis

- **The conference service can be regarded as an extension of the publishing platform.  
(collaborative environment)**
- **It is directly related to the connectivity matters**

## Best practice

- **Ensure the power capacity of the conference system**
- **Adapt the conference system to the specificity of needs (images, videos, sound system sharing)**

## **New service proposal**

- **Offer a general collaborative system, which include conference services.**

**=> Link with publishing platform and other collaboration tool.**
